### HG super powerful toilet cleaner

Difficult to remove deposits can form in any toilet. Problem dirt such as persistent limescale, urine stains, or other difficult to remove deposits occur on the inside of the toilet bowl, but also in the neck or invisibly under the rim. The dirt under the rim means the toilet is never hygienically clean – it can cause a musty odour and it reduces the flush action of the toilet. The specially developed formula of HG "super powerful toilet cleaner" adheres to the surface of the toilet bowl and ensures an effective removal of all problem dirt. This product does not contain hydrochloric acid, because that substance affects the glaze of your toilet pan and makes it rough. Furthermore, hydrochloric acid gives off vapours that affect and damage the surface of stainless steel and chrome in your bathroom. In other words, HG "super powerful toilet cleaner" is safe for glaze, stainless steel and chrome.

**Directions for use:** Squeeze the sides of the lid and simultaneously turn the lid to open. Spray HG "super powerful toilet cleaner" deep under the rim of the toilet bowl and in the bowl. Leave the gel to work at least 20-30 minutes and then brush the toilet bowl clean with a toilet brush. Finally flush the toilet.

**Attention:** Transport and store the bottle upright. Prevent contact with marble and other chalky surfaces. Rinse the toilet brush properly after use. For regular cleaning of the toilet bowl, it is best to use HG "hygienic toilet gel". For quick daily and hygienic cleaning of everything in the toilet area, such as the seat, the outside of the bowl, the cistern, the hand basin, the tap, and even the door handle, we recommend HG "hygienic toilet area cleaner". • Medical personnel can request the data sheet via +31 (0)36 54 94 777 • The consumer's information sheet can be obtained via [www.HG.eu](http://www.HG.eu)
