HG oil & grease stain absorber (HG product 42)

HG "natural stone oil & grease stain absorber" is a unique product for the easy removal of virtually all types of oil and grease stains from all porous stone surfaces, such as flagstones, terracotta, marble, sandstone and other types of natural stone, as well as cement and concrete floors. It is a self-acting product which absorbs the oil or grease from the stone.

Directions: Stir well before use! Now use a spatula or spoon to apply a thick layer of approximately half a centimetre to the stain, first applying the product around the stain and then filling it inwards. Wait until it is completely dry, (at least four hours) and remove the plaque which has formed. Repeat the treatment for stubborn oil or grease stains. Any residue can be removed using a damp cloth.

Caution: Transport and store the jar upright. If this product is used on surfaces treated with a protective film, this protective layer must be reapplied after cleaning.
