silver shine cream

for a super shine

does not scratch

125 ml e

HG silver shine cream

HG "silver shine cream" is a very sophisticated, modern "silver polish" product. Rather than actually polishing, the specially selected polishing agents allow deposits to be simply rubbed away. HG "silver shine cream" does not scratch and is therefore safe to use on all solid silver and silver plated objects. Due to the handy, dosing pump it is clean, easy and economical to use.

Instructions for use: If necessary, remove protective layers such as HG "silver & copper polish-no-more-finish" beforehand with acetone. Shake the bottle well before use. Apply a small quantity of HG "silver shine cream" on a (soft) polishing cloth and then rub lightly onto the object. While rubbing, dirt such as black deposits will be removed. Allow the cream 1 minute to dry in and then lightly polish it out until the cream has been entirely removed. Regularly use a clean area of the cloth. Protect the resulting super shine with HG "silver & copper polish-no-more-finish".

Attention: Transport and store the bottle upright. Keep in frostfree area. Do not rub the surface of antique silver objects with HG "silver shine cream" if the surface has a patina that should not shine. Refit the clear plastic cover fully back over the top of the bottle after use to avoid the product drying in the pump mechanism. • Medical personnel can request the data sheet via +31 (0)36 54 94 777. • The consumer's information sheet can be obtained via www.HG.eu
